The Orphanage has reserved The Delectation Dome of the Hotel California for the celebration of the 466th Anniversary of the *Confessio Augustana*. The Loyal Order of *Un*-reconstructed Freaks has encrypted the *Summer Tour Itinerary* as per a 32-bit microprocessor at a rate of 26 clock cycles per byte, to be run on less than 5K memory (XORs, +, table lookups on 32-bit operands), thereby foiling The Pigs' reliance on mega-crunch search strategy vis-à-vis the Revisionists' ability to monitor institutional mainframes. *Matthias Flacius (Illyricus)* has specified a 64-bit cipher with a variable-length key of up to 448 bits. The Little Orphan Children *sub specie* ADW 12/1/93 (Fabius Cunctator, Ireton... Kitchener Pasha) are to sequentially factorize Cromwell's address to Parliament, *July 4, 1653*, by calibrating the *complete modular exponentiator* as per "**YOU ARE ON THE EDGE OF PROMISES AND PROPHECIES.**" *Nota Bene*: The Pelagians can only analyze any given transmission as "a single, fixed state at a specific moment" which renders *Polynomial Time* invisible to their heathen analysis. *The Midget Tag Team* has circumvented both The Problem of Decoherence (cf., superimposed waveforms at 1° Kelvin) and the necessity of $(1/(1-p))^n$ gates by the **FOURTH LEVEL** application of "**Behold, I make all things new.**"
